

Vista Air AIA CES Presentation

As an Architect, you are faced with keeping up with new techniques for solving problems as well as the explosion of new products. The biggest challenge is identifying which ones will be most valuable to you and your clientele, and when you'll have time to study them. Vista Air, a division of Construction Specialties (CS), is the newest valuable product available in the market.

Refer to the below course description for the topic & credits awarded for Vista Air:

Vista Air Vertically Folding Walls

Course Number: VISTA1

Course Title: *Flexible Space Management- Your New View*

Credit Awarded: 1 LU & 1 HSW

Participants Will Learn:

1. There is a growing need to transform space within and between a building's walls.
2. Vertical Bi-Folding Doors (VBDs) are a popular solution for flexible space management.
3. The different VBDs options available and the benefits & drawbacks of each, including the amount of space each system's mechanisms occupy in addition to the rough opening.
4. Why a screw-drive VBD is a valuable, clean, architecturally appealing solution to managing space that takes up little more than the rough opening.

Our presenters offer participants valuable insight into the direction of our industry by exploring the proper application and specification for this product. All presenters are highly knowledgeable in the practical and technical aspects of the presented subject matter. Scheduling requirements and availability are flexible. There is no cost to participants.

To schedule a presentation, please contact Chris Donohue at CDonohue@c-sgroup.com or 908-325-4939.
